The Business Story

The Challenge

As organizations accelerate digital transformation and AI adoption, trusted enterprise data becomes a strategic asset. Fragmented governance, inconsistent data ownership, and poor data quality reduce confidence in business decisions and increase operational risk.

- Inconsistent governance across business functions.
- Undefined ownership of critical enterprise data.
- Duplicate and inconsistent master data.
- Limited visibility into data quality.
- Regulatory and compliance risks.
- Lack of enterprise-wide governance standards.

The Solution

MatrixOne conducts a structured Enterprise Data Governance Assessment to evaluate:

- Governance maturity.
- Data ownership and stewardship.
- Data quality management practices.
- Governance policies and standards.
- Compliance readiness.
- Executive governance roadmap.

The Outcome

Organizations benefit from:

- A standardized governance framework.
- Clearly defined business ownership.
- Improved data quality and consistency.
- Greater regulatory readiness.
- Trusted enterprise data supporting AI and analytics.
